Octopus App for Business now enables ALL Octopus users to pay on merchant mobile devices!

Merchant Mobile Devices are now Octopus Readers.

| Octopus for Business | 🔍 | GET IT ON Google Play | Download on the App Store |

From now on, receiving Octopus payment is easier than ever.

- *Octopus App for Business* has introduced an enhanced feature, allowing merchants to **transform their NFC mobile devices into Octopus readers**, to receive payments from Octopus cards and products (including Smart Octopus in Samsung Pay), offering a broader range of payment options than O! ePay QR Code.

- Existing merchants simply need to upgrade their *Octopus App for Business*, with a NFC mobile device, to enable this mode for transactions.

- This enhanced feature is available from 28 March 2018 onwards at Google Play and App Store.

Supporting Cash-based Businesses and Trades

After upgrading or installing the *Octopus App for Business*, Android mobile devices users will be provided with a tutorial on how they can enable the service.

Enable "Accept Octopus card payment" in "Settings", and allow "location and motion detection permission".

Place the Octopus card at the NFC area of your mobile device until the "success" message is shown.

Complete 5 times of card tapping before accepting Octopus card payment.

Upon completing the tutorial, merchants can receive payments from either **Octopus cards** or through **O! ePay QR Code**.

Select "Payment" in the main menu in Cashier Mode and input the payment amount.

Generate the payment page with electronic QR Code for placing Octopus card* on the back of the mobile device or scanning electronic QR Code with Octopus App O! ePay for payment.

The payment receipt will be shown on screen once the payment transaction is completed for customer's review.

From now till 29 June 2018, merchants who successfully sign up for a Business O! ePay account can enjoy a waiver of the first 12 months' Bank Account Fund Transfer Fee. For details, please visit www.octopus.com.hk

Technical requirement: Android (4.4 or above) with NFC function or iOS (9.0 or above) with Octopus Mobile Reader. List of tested devices:
